MATERIAL Polypropylene (PP) base and TPU (thermoplastic elastomer) contact surface

# KING SNAKE GRATING

## 2. DESCRIPTION

New bendable overflow grate, for the outflow of water at the edge of the pool, equipped with a characteristic non-slip squared structure.

Thanks to the materials of which it is made (main structure in polypropylene and contact surface in thermoplastic elastomer), it is possible to reduce the risk of slipping even at an inclination of up to 35°, making the walkway around the pool extremely safe. The grate is EC 13451-1 certified.

Moreover, TPU is aesthetically very attractive and pleasant to the touch, does not trap fingers and has excellent structural integrity. Thanks to its structure, it is possible to adapt the grate to any shape and profile.

Furthermore, it does not degrade even when exposed to saline and corrosive environments, and is resistant to UV rays, as well as non-deformable and with a high standard of mechanical resistance.

A particularly suitable product that can be used in all those structures where effective water drainage is required without fear of slipping.

## 3. USE

Used in pedestrian areas, especially at the edges of private and public swimming pools, as well as wellness centers and spas, whirlpools, water parks, changing rooms, spas, saunas..

## 4. TECHNICAL SPECIFICATION

Voce	Descrizione	Unità	Prezzo
<b>Dak.D.POZ90.13x1PMx</b>	Supply and installation of bendable edging grating, for water runoff at pool edges, equipped with a characteristic non-slip "checkmate" structure. Thanks to the materials of which it is composed (polypropylene base and thermoplastic elastomer contact surface), it is possible to drastically reduce, if not eliminate, the risk of slipping even at an inclination of up to 35°, making the pedestrian walkway at pool edges extremely safe. The grating is certified EC 13451-1 and Anti-slip according to DIN 51097 "wet areas with barefoot treading."	-	-
