MATERIAL Made of PA (polyamide) and fiberglass.

ADJUSTABLE ANCHOR ARK-DUO

2. DESCRIPTION

The Ark-Duo adjustable anchor is a telescopic product for indoor use, measuring from 80 to 140 mm, which facilitates and speeds up the installation and fixing of insulation and plasterboard.

3. USE

The Ark-Duo adjustable anchor is used to maintain the necessary distance between the existing wall and the new plasterboard wall, thus allowing the installation of isolation panels between the two. It can be used on both regular and irregular walls, with a metal structure for plasterboard or fixed directly onto the existing wall. **The support can only be used with a structure with a flattened edge.**
