1. DATI E DOCUMENTAZIONE

Code	Description	Measures	Weight (kg)	Color	Pkg. / Pallet
TER23-5096	Composite reinforced strip for internal and external corners	60 mm x 30,5 m	1,3	White	1 pz. / -

MATERIALE Carta e composito

2. DESCRIPTION

Pre-folded and reinforced technical tape for joints, replaces corner profiles and makes external and internal corners perfectly straight. It is four times stronger than reinforced tape. It also makes the corner waterproof, thus preventing rusting. In particular, it replaces reinforced strips and metal edges. Paper-free and metal-free, its composite material gives it superior finishing and resistance. Installation of the original tape is faster and the final result on the corner is better.

3. USE

Used to create corners and arches in plasterboard, it straightens and reinforces ALL CORNERS, 22°, 45°, 90°...135°.

- External corners, it is used instead of reinforced strips. + fine, - coating.
- Internal corners, when there is space between one plasterboard panel and another.

COMPOSITE REINFORCED STRIP

4. INSTALLATION

- Cut to the desired length and fold the strip inwards.
- Cut the ends at a 45° angle.
- You can give it the desired angle because the tape is shape-memory.
- Apply filler to both sides of the corner (about 5 cm per side).
- Position the strip and press it down with the spatula.
- Leave to dry and finish.
- The strip will leave a thin, straight edge.
- Sanding will give a flawless finish before painting.

5. ADVANTAGES

- 6 cm x 30,5 m
- Instantly makes all corners perfectly straight.
- Impact resistant, 4 times stronger than reinforced tape.
- Replaces metal strips, no waste and less filler!
- Waterproof, does not rust.
- Can be filled with filler immediately.
- Second coat can be applied immediately and requires less filler.
